Product Reliability Target Study Plan (PRTSP)

Key Point(s):

- The Product Reliability Target Study Plan is the document that describes how the supplier will achieve the reliability target agreed with the Nissan (which will be requested through Request for Quotation (RFQ) or relevant document).
- The reliability requirement is defined in the supplier specification as a proportion of failures at a mileage term in RFQ if applicable.

Minimum Content Requirement(s):

- The Product Reliability Target Study Plan shall include:
  - A gap analysis which compares the target set by Nissan to the supplier's current performance.
  - A plan of actions defined by the supplier that shall be implemented to achieve the target. This plan of actions shall include:
    - Timing of key events with responsible people, deadlines
    - Analysis and calculation methods to be used to achieve reliability target
    - The validation plan to reach the reliability target

Output Document Description:

- The relevant Nissan department designated format or supplier own document.
